## 1) Considerazioni scientifiche sul Disegno Intelligente.

Per secoli è sembrato che scienza e religione, ragione e fede, non potessero conciliarsi, e che le risposte alle eterne domande sull'esistenza e sui suoi perché, trovassero nella ricerca scientifica e nel metodo galileiano una negazione all'esistenza di Dio. Mi sento di fare oggi due considerazioni tratte dalle RIFLESSIONI DI UN IGNORANTE. (Italian Edition) più avanzate ricerche nel campo cosmologico ed evolutzionistico che sembrano invece, a mio modesto parere, contraddire questa opposizione.

1) Il RIFLESSIONI DI UN IGNORANTE. (Italian Edition) grande dilemma della astronomia contemporanea è il tentativo di conciliare la relatività di Einestein con la meccanica quantistica. La ricerca di una teoria unificata e il tentativo di trovar ragione a fenomeni come l'espansione dell'universo, ha portato a modelli matematici come la teoria delle stringhe che però manifestano vistose lacune. Uno dei principali problemi è che le costanti fondamentali di questi modelli hanno valori tarati esattamente per consentire l'esistenza dell'universo e della vita. Ciò in un sistema casuale che escluda una mente creatrice non è possibile a meno di ricorrere ad artifici indimostrabili come l'esistenza di una infinità di universi, ognuno con proprie costanti e conseguenti leggi fisiche, che giustificino il nostro caso particolare. Ma l'esistenza di questi altri universi è indimostrabile e pertanto si contravviene al metodo galileiano chiedendoci di accettarli come imprescindibili, in pratica di accettarli per "fede". La cosa rasenta il ridicolo anche perché sembra molto più logico ed empirico pensare che quelle costanti abbiano quel valore perché le si è volute così.

2) Le dimensioni del cervello di un animale crescono con l'aumento delle dimensioni corporee, con un fattore di  $\frac{3}{4}$ . Il quoziente di encefalizzazione confronta la massa cerebrale effettiva di una specie con quella attesa in base alla massa corporea. Ovviamente il valore più alto (7,5) è quello dell'uomo, i delfini per esempio hanno un valore 5,3.
